✅ CAPE PLASTER & POOLS — MASTER SITE MAP (LOCKED)

✅ CAPE PLASTER & POOLS — MASTER SITE MAP (LOCKED)

The below are logo.svg and hero.webp which are in the assets folder and also the logo on dark blue

CAPE PLASTER

AND POOLS

CAPE PLASTER
AND POOLS

Hero.webP is this file for the home page hero

LEVEL 0 — GLOBAL ELEMENTS

HEADER (TO BE BUILT — CLEAN)

Purpose: orientation only

Logo (left)

Home
Services ▾
Areas ▾
Gallery
Blog
About

Contact
WhatsApp (primary CTA)

Services dropdown

- Fix & Supply Projects
- Home Maintenance
- Plastering & Finishes
- Pool Renovations

- Waterproofing
- Stonework & Paving
- Landscaping & Exteriors

Areas dropdown (REGIONS ONLY)

- Southern Suburbs
- Deep South
- Atlantic Seaboard

❌ No suburb lists
❌ No selling copy
❌ No mega menu

FOOTER (LOCKED — DO NOT CHANGE)

Purpose: depth + SEO reinforcement

- Full service list
- Full suburb lists grouped by region
- Social icons
- WhatsApp
- Contact email: quote@capeplasterandpools.co.za

Footer already does:
✔ deep internal linking
✔ suburb discovery
✔ SEO reinforcement

LEVEL 1 — CORE PAGES

/
Home

/services/
/services/fix-and-supply/
/services/home-maintenance/
/services/[other services]

/areas/ ← MASTER INDEX (NEW)
/areas/southern-suburbs/
/areas/deep-south/
/areas/atlantic-seaboard/

/gallery/
/blog/
/about/
/contact/

LEVEL 2 — /AREAS/ MASTER INDEX (THE MAP)

Role:

- Canonical directory of all locations
- Sits between header and footer
- Big, confident, structured
- Links down, not sideways

Content:

- Hero: “Areas We Work In Across Cape Town”
- Region blocks:
    - Southern Suburbs → hub
    - Deep South → hub
    - Atlantic Seaboard → hub
- Short regional context
- CTA to WhatsApp / Contact

LEVEL 3 — AREA HUB PAGES (AUTHORITY)

Example:

/areas/southern-suburbs/

Each hub page:

- Feels impressive and capable
- Explains regional conditions
- Links to:
    - All suburb pages in that region
    - Core services
    - 2 relevant blogs

No suburb-level duplication here.

LEVEL 4 — SUBURB / LOCALITY PAGES (DEPTH)

Example:

/areas/southern-suburbs/constantia/

/areas/deep-south/kommetjie/
/areas/atlantic-seaboard/camps-bay/

Each suburb page:

- Full 17-part locality content pack
- Links to:
    - Fix & Supply
    - Home Maintenance
    - 1–2 relevant services
    - 1 relevant blog
- Links back up to:
    - Its area hub

This is where SEO weight lives.

LEVEL 5 — BLOGS (SUPPORT + FUNNEL)

Purpose:

- Address pain points
- Support areas and services
- Funnel to WhatsApp

Blogs link:

- Down → suburb pages
- Sideways → services
- Up → /areas/ or area hubs

Blogs do not replace area pages.

🔁 INTERNAL LINK FLOW (MASTER LOGIC)

HEADER
→ Area Hub
→ Suburb Page
→ Services

→ Blog
→ WhatsApp

FOOTER
→ Suburb Page
→ Area Hub
→ /areas/

BLOG
→ Suburb Page
→ Area Hub
→ Services

No dead ends. No loops. No clutter.

🧠 WHY THIS STRUCTURE WORKS

- Header stays premium and calm
- Footer carries SEO depth
- /areas/ acts as the map
- Hubs act as authority routers
- Suburbs carry depth
- Blogs support everything

This scales cleanly to 50+ area pages.

🧩 HEADER — WHAT STILL NEEDS TO BE CREATED (FOR REVIEW)

You still need to review the header visually, not conceptually.

Header visual requirements

- Dark background
- Montserrat
- White logo, no glow
- Flat, calm WhatsApp button

- Subtle hover states
- Desktop + mobile
- Dropdowns for Services and Areas only

Header must:

✔ feel restrained
✔ not compete with footer
✔ not explain anything

🧾 MASTER PROMPT (COPY THIS EXACTLY)

You can paste this into a new ChatGPT thread or reuse it later.

MASTER PROMPT — CAPE PLASTER & POOLS SITE

We are building the Cape Plaster & Pools website. The footer is complete and locked. Do not redesign or restructure the footer.

The site must follow this structure exactly:

HEADER

- Clean, dark header
- Montserrat
- Logo left
- Menu: Home, Services (dropdown), Areas (dropdown), Gallery, Blog, About
- Contact + WhatsApp CTA on the right
- Services dropdown lists core services only
- Areas dropdown lists regions only: Southern Suburbs, Deep South, Atlantic Seaboard
- No suburbs in the header
- No selling copy in the header

FOOTER

- Already built
- Contains full suburb lists grouped by region
- Contains service links, social icons, WhatsApp, and contact email
- Email is quote@capeplasterandpools.co.za

AREAS STRUCTURE

- /areas/ is the master index page listing all regions
- /areas/southern-suburbs/, /deep-south/, /atlantic-seaboard/ are hub pages
- Each hub links to its suburb pages
- Suburb pages contain full 17-part locality content
- Suburb pages link to services and blogs

BLOGS

- Blogs address homeowner pain points
- Blogs link to area hubs, suburb pages, and services
- Blogs do not replace area pages

GOAL

- Premium, capable, modern feel
- Not small, not flat, not salesy
- Strong internal linking
- SEO-first but human-focused
- WhatsApp is the primary CTA

Do not suggest changing this structure. Build within it.

✅ NEXT STEP (CLEAR)

I will now:
➡️ Create the HEADER (HTML + CSS + mobile) for you to visually review

Say “build header” and I’ll do exactly that next.

✅ FINAL TYPOGRAPHY SCALE

✅ FINAL TYPOGRAPHY SCALE

Font family everywhere: **Montserrat**

Colour rules stay as agreed:

- Primary text: `#00112D`
- Accents / hover: `#024E97` → `#11B6F0`
- Text on dark: `#F9F9F9`

No white unless necessary.

1️⃣ HEADER TYPOGRAPHY (REFERENCE POINT)

This is your **benchmark**. Everything else must harmonise with this.

Main menu (top-level)

Font size: 17–18px
Font weight: 600
Letter spacing: 0.02em
Colour: #F9F9F9

This is the *authority baseline*.

Dropdown menu items

Font size: 14–15px
Font weight: 500
Line height: 1.5
Colour: #F9F9F9
Hover: #11B6F0

Slightly smaller than header menu is correct.
That visual hierarchy is working — keep it.

2️⃣ BODY TEXT (SITE-WIDE)

Paragraph text

Font size: 16px
Font weight: 500
Line height: 1.6
Colour: #00112D

This is optimal for:

- readability
- international users
- long-form SEO pages

Do **not** drop below 16px anywhere.

3️⃣ HEADINGS (SITE-WIDE)

H1

Font size: 40–48px
Font weight: 700
Colour: #00112D

H2

Font size: 28–32px
Font weight: 600
Colour: #00112D

H3

Font size: 20–22px
Font weight: 600
Colour: #024E97

H4 (use sparingly)

Font size: 17–18px
Font weight: 600
Colour: #024E97

4️⃣ FOOTER TYPOGRAPHY (THIS IS THE FIX)

Here’s where things were slightly too timid before.

Footer column headings (H3)

Font size: 18–19px ← increase from before
Font weight: 600
Letter spacing: 0.02em
Colour: #9FF6FF (or #11B6F0 at low opacity)

This gives presence without shouting.

Footer links

Font size: 16px ← THIS is the key change
Font weight: 500
Line height: 1.6
Colour: #F9F9F9
Hover: #11B6F0

Anything smaller than 16px in a footer now feels dated and underconfident.
You were right to feel it.

Footer brand blurb

Font size: 16–17px
Font weight: 500
Line height: 1.6
Colour: #D8F3FF

This keeps it readable without competing with content.

Footer bottom line (copyright)

Font size: 13px
Font weight: 500
Colour: #CDEFFF

This can stay small. It’s meta.

5️⃣ BUTTONS (INCLUDING WHATSAPP)

Primary CTA buttons

Font size: 15–16px
Font weight: 700
Letter spacing: 0.02em

WhatsApp button

Font size: 15px
Font weight: 700
Text colour: #00112D

The contrast comes from **size and weight**, not white text.

6️⃣ WHY THIS WORKS (IMPORTANT)

- Header stays dominant
- Dropdowns stay refined
- Footer no longer feels “afterthought”
- Text colour stays on-brand
- No accessibility issues
- No SEO penalties

This is a **modern, international service-business scale**, not a theme-default scale.

7️⃣ WHAT TO DO NEXT (FAST)

1. Update footer link font size → **16px**
2. Update footer heading font size → **18–19px**
3. Leave header + dropdown exactly as-is
4. Do not introduce white to “fix” contrast

After that, **stop touching type**.

If you want, next I can:

- convert this into **CSS variables**
- or do a **one-page typography checklist** you can reuse forever

You’re very close to “locked and done” now.

🎨 FINAL CANVA BRAND KIT AI PROMPT

🎨 FINAL CANVA BRAND KIT AI PROMPT

Brand name:
Cape Plaster & Pools

Industry:
High-end plastering, pools, renovations, and home maintenance

Brand style:
Professional, calm, modern, reliable
Premium but not flashy
Architectural, clean, international
Built for homeowners, including overseas property owners

COLOUR PALETTE (LOCKED)

Primary Deep Navy (main text, structure)
#00112D

Brand Blue (headings, navigation)
#024E97

Bright Blue (hover, highlights, links)
#11B6F0

Light Grey (backgrounds)
#F9F9F9

Green Accent (very limited use only)
#55CA39
Use sparingly for subtle hover effects, animations, and selected CTAs only.
Do not use for body text or large areas.

GRADIENTS (OPTIONAL, CONTROLLED)

Use subtle blue-only gradients:
#00112D → #024E97 → #11B6F0
No green in gradients.
No white glare.

TYPOGRAPHY

Font: Montserrat

H1 – 44–48px, weight 700
Used for page titles and hero headings

H2 – 28–32px, weight 600
Used for major sections

H3 – 20–22px, weight 600
Used for sub-sections, footer headings

H4 – 17–18px, weight 600
Used sparingly for labels

Body text – 16px, weight 500
Used for all paragraphs and links

Avoid font sizes below 16px except small meta text.

LOGO & ASSETS

Store all logos, graphics, photos, and PDFs centrally.
Use provided logos only.
No recolouring, shadows, or effects.

DESIGN RULES

Minimal layouts
Strong alignment and spacing
No playful fonts
No decorative shapes
No trends or gimmicks
Calm, professional, confident look

Goal:
Create a consistent, trustworthy brand system that feels capable of large, complex property projects.
